

Dasari Mohith Reddy

Backend Developer | Competitive Programmer

I am a Computer Science Engineering student, proficient in Python. My enthusiasm for problem solving is evident through participation in competitive programming contests, where I consistently demonstrate a strong understanding of algorithms and data structures. I am eager to contribute my technical skills and analytical mindset to dynamic and challenging projects in the field of software development.

EDUCATION

BTech CSE

The Apollo University

10/2022 - Present

CGPA 9.65

12th Grade

Sainik School Kalikiri

06/2019 - 05/2021

Percentage 82%

INTERNSHIPS

BACKEND DEVELOPER INTERN

BANO DESI

02/2024 - 04/2024

Description

- Collaborated with a team of developers to design and implement backend functionalities.
- Utilized Python and Flask for seamless communication between the frontend and backend.
- Developed and maintained SQL databases, ensuring data integrity and efficiency in data retrieval and manipulation.
- Participated in code reviews, debugging, and troubleshooting to ensure high-quality code and smooth application functionality.

ML INTERN

Apollo Clinical AI Labs

05/2022 - 06/2022

Description

- Developed a machine learning application to streamline the patient recruitment process for clinical trials, reducing time and improving efficiency.
- Designed and implemented an intuitive user interface using Streamlit to provide seamless interaction between users and the AI models.
- Contributed to the documentation of the system's features, setup, and usage guides for future improvements and scalability.

COMPETITIVE PROGRAMMING

LeetCode (01/2024 - Present)

100+ Problems solved [Profile Link](#)

GeeksforGeeks - 4 Star

[Profile Link](#)

CodeChef - 3 Star (10/2022 - 07/2023)

PERSONAL PROJECTS

Binary Search Visualizer

- I developed a binary search algorithm visualizer using HTML, CSS, and Python with Flask framework, deployed on Render.
- This project showcases my proficiency in web development, Python programming, and deployment on cloud platforms.
- GitHub Link : [Binary Search Visualizer](#)
- Website Link: [Binary Search Visualizer](#)

Smart Cart System

- Led the development of a Smart Cart System project, showcasing strong collaboration and innovation within Team Mjölñir.
- Designed and implemented a user-friendly interface using Python libraries to enhance the user experience and system efficiency.
- Developed input validation features, ensuring that users can specify budget and quantity constraints for a seamless shopping experience.
- Successfully presented and demonstrated the Smart Cart System during a live event, effectively communicating project goals and technical achievements.
- GitHub Link : [Smart Cart System](#)

Online Voting System

- I planned and implemented an Online Voting System with user, admin, and candidate profiles, highlighting my Java programming and UI skills.
- Demonstrated abilities include creating user friendly applications, managing authentication, and administrative tasks.

CERTIFICATES

Programming, Data Structures and Algorithms using Python (01/2023 - 04/2023)

Organization: NPTEL

Introduction to Machine Learning (07/2024 - 09/2024)

Organization: NPTEL Top 5%
